

Plastic Mudguards

For Single and Tandem axle trailers

Data Sheet Issue 00/01

APPLICATION

Peak Trailers offer a wide range of plastic mudguards for single and tandem axle trailers.

Group A are single mudguards of a traditional design which are available to suit 10" and 13" wheels and tyres. They are made from recyclable high density polyethylene making them very flexible, tough and resistant to alcohol, petrol and diluted acids. They are very strong and will quickly regain their shape if deformed.

Group B are single mudguards designed with a flat inside web for easy attachment to the sides of a trailer without the need for extra brackets. They are available to suit 8", 10" and 13" wheels and tyres. The 8" and 10" are made of polypropylene and the 13" from high density polythene which gives them resistance to minor damage.

These mudguards are normally supplied coloured black but for large volume purchases some other colours are available. *Please ask our Sales Team for advice.*

Group C are tandem mudguards to suit 10", 13" and 16" wheels and tyres. They are made from ABS (Acrylonitrile Butadiene Styrene- Automotive grade) which makes them very resilient.

Peak mudguards are very competitively priced and provide the trailer manufacturer with an economic solution for most mudguard requirements.

These mudguards can also be used with some other wheel sizes which are not mentioned. *Please ask our Technical Department for assistance.*
