

Car Transporter Kits

Data Sheet Issue 00/01

Please note a 'kit' comprises of steel fabrication work only, i.e. no undergear.

APPLICATION

Car Transporter Kits are available in three different sizes, 12' (3660 x 1855mm), 14' (4270 x 1855mm) and 16' (4880 x 1855mm) with a maximum gross weight capacity of 2500kgs. These strongly constructed Car Transporter chassis are supplied as a bolt together kit that can be easily and quickly assembled.

Each Kit has 2 main runners, 2 ramps, 1 A-Frame, 1 rear section, 1 rear cross member and mudguard brackets. Lashing hooks and a winch mounting post are included with a spare wheel carrier as an optional extra. All parts are made of heavy gauge material with a galvanised finish.

All Kits can be fitted with Peakride or Bramberide rubber suspension axles which have excellent ride characteristics and can be galvanised if required. The 14' and 16' kits are pre-drilled for twin axle application and are generally used for larger cars. The 12' can be used with one or two axles and is predominately used for smaller cars. It is not pre-drilled to allow the customer to position the axle(s) to suit.

The ramps are easily located for loading/unloading and are safely stowed aboard when not in use. The majority of these Kits are used with 13" wheels and tyres but in some circumstances smaller combinations are available.

Please ask our Technical Department for assistance.
